PXN [METAL FURNITURE - 800 range]

Technical data:

- Decoiler: capacity 4000 kg
- Straightener: 5 + 4 rollers
- Strip width: 20 - 830 mm
- Strip thickness: 0.2 - 2 mm
- Moving presses: 10 + 10
- In-line presses: 2
- Cutting shear: integrated
- Stacking bench and height-adjustable unloading table

Advantages

DALCOS® PXN "METAL FURNITURE" coil punching machine has been tailor-made to manufacture metal furniture, shelving, electrical boxes and data transmission cabinets. With all the DALCOS® experience in the sector behind it, PXN "METAL FURNITURE" is the ideal line for the automatic processing of panels, shelves, uprights and doors that make up metal furniture.

DALCOS® Vega Bialternato® patented grip feeder enables all materials processing, including prepainted sheet metal and prefinished materials with or without protective film. DALCOS® PXN "METAL FURNITURE" punching machine includes 10 + 10 moving tools dimension B and C, moving independently on each side of the strip.

The simultaneous front and back processing of symmetrical products is thus possible. The two in-line presses installed after the moving presses activate big punches for notching and front and back operations. The integrated transversal cutting shear cut off the product ready to be bent. The use of standard thick turret punches, available throughout the world, makes the PXN "METAL FURNITURE" highly versatile. The provided parametric software allows panels and shelves of differing sizes to be processed one after the other and using up to 100% of the material. The line is completed with a 4000 kg hydraulically-open expanding decoiler, straightener and stacking bench and height-adjustable table, suitable to process prefinished materials as well.
